

1. Improved health week

- Reintroduce district outreach

- Seek sponsorships early, and in forms that are not necessarily monetary. Also, by awarding people who bring on sponsorships.

2. On the front of SCOPH, MSA needs to improve on its mandate as an educator on Public Health issues, and I will pursue that through extensive radio programs. The MSA already has established good networks in that regard; partnering some radio stations in Tamale.

3. Organise donations and health screenings for orphanages. A social responsibility on us, even in our small capacities as medical students, to provide some level of care to the societies that we come from. And I believe the orphanage is a good place to start from.

There was an Oral health day donation to Nyohini Children's Home in 2021 and that's an example we can emulate.

3. Organise an outreach in select communities to screen for common health issues and seek sponsorship in medical or surgical care.

Consultations have already begun with a rep of Palmar Xchange, and there is positive response thus far.

Them, and many others are willing to partner the MSA.

4. Actively "chase" the Metropolitan Directorate of health to actively consider the UDSMSA when looking for partners in their activities. The Ministry of Health, and the Ghana Health service as well.

5. Organise at least two blood donation exercises, in partnership with GPSA and MELSSA.

6. Quite aside the duties as HO, in consultation with the executive board I will serve with, open discussions with the other associations in the Health Sciences to form one umbrella association.

This is in a bid to foster unity between and among the various health sciences students, and encourage teamwork from even our days as students.
